

This presentation contains forward-looking statements regarding future product plans and development efforts. SolarWinds considers various features and functionality prior to any final generally available release. Information in this presentation regarding future features and functionality is not and should not be interpreted as a commitment from SolarWinds that it will deliver any specific feature or functionality in the future or, if it delivers such feature or functionality, any time frame when that feature or functionality will be delivered. All information is based upon current product interests, and product plans and priorities can change at any time. SolarWinds undertakes no obligation to update any forward-looking statements regarding future product plans and development efforts if product plans or priorities change.

Observability

You can't secure what you can't see!

Dylan Lloyd, Account Executive | Enterprise Africa, SolarWinds
Prineel Padayachy, CTO, ATS Network Management

We're SolarWinds

Simplifying IT and empowering businesses for over 25 years

WHAT WE DO

Monitoring & Observability 

 IT Service Management

Secure by Design

SolarWinds becomes the first software provider to align with new CISA secure software development guidance.

AI by Design

SolarWinds establishes foundational principles for responsible artificial intelligence (AI).

Not only did they have the right tools, knowledge, and expertise, but they listened. They evolved and grew with us.

— Justin Diana
Vice President of IT,
Corevist

Between 2019-2023
the pace of digital transformation moved
so fast companies compressed a
5-to-7-year digital roadmap into
24 months.

Innovation is now growing **5x** faster.

The top priority for leading companies?

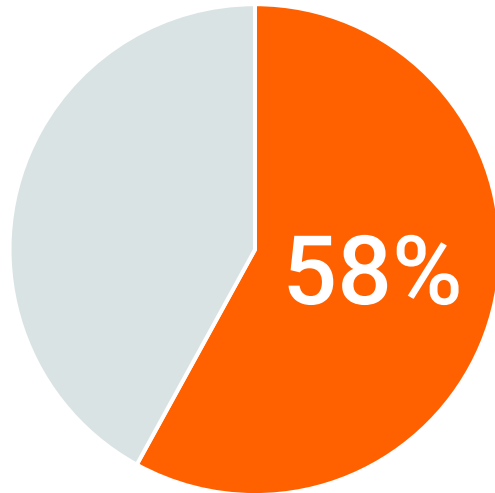

**Scaling innovation through
digital transformation**

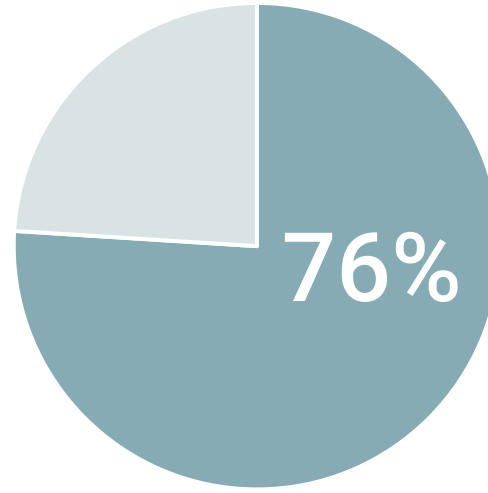

Complexity Leads to Observability Challenges for Today's Modern Tech Stack

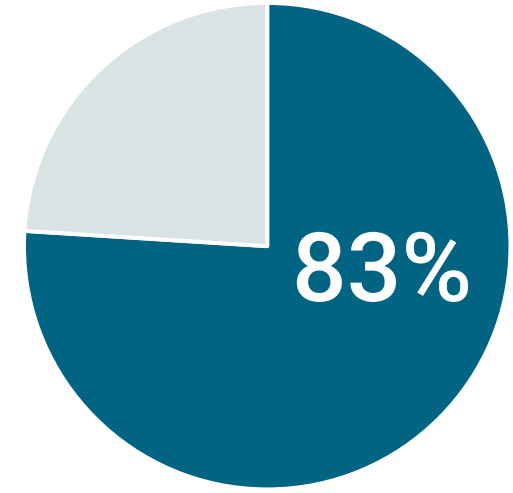

Hybrid IT Observability Challenges

State observability blind spots in today's modern networks present extreme challenges.¹

Cite ongoing cloud operational management as a critical challenge.²

Identify managing on-prem and cloud systems in parallel as a primary or secondary operational challenge.³

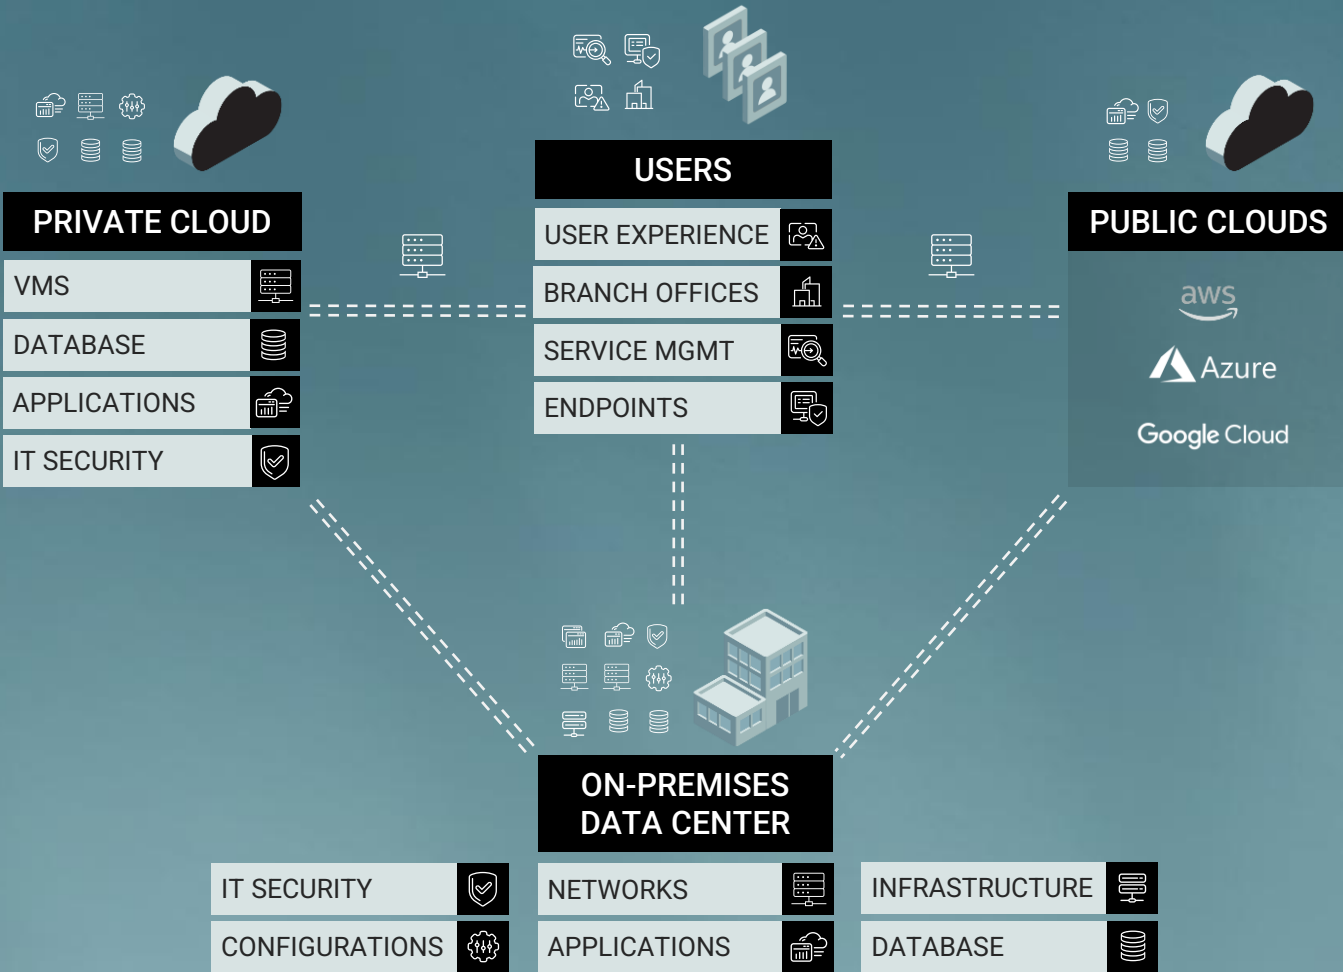

Sources: 1. [SolarWinds IT Trends Report 2023](#), September 13, 2023. 2. [ESG 2023 Technology Spending Intentions Survey](#), November 29, 2022. 3. [GigaOm Survey Report: Delivering Application Performance in a Hybrid World](#), August 28, 2024.

INDUSTRY CHALLENGES

Applications

Track, monitor, and optimize your apps. Gain comprehensive and detailed code-level monitoring to assess, debug, and troubleshoot application performance.

- Proactive performance monitoring using time-series performance metrics
- Correlated metrics, traces, and logs to ensure optimized application performance
- Commercial application availability and performance monitoring
- GenAI-driven root cause analysis and troubleshooting

- Proactive issue detection
- Faster troubleshooting
- Enhanced productivity
- End-to-end visibility

“SolarWinds was the right choice for Corevist for the simple reason that they ‘get it.’ They have the right tools, knowledge, and expertise, and they listen. It’s rare to find partners in the market like SolarWinds.

Justin Diana | VP IT Technology | Corevist

Application Performance Monitoring

Track, monitor and optimize your hybrid apps

Gain comprehensive and detailed code-level monitoring to assess, debug, and troubleshoot hybrid and distributed application performance.

- Code-level Monitoring
- Metrics
- Logs
- Traces

Proactive Issue Detection

Address performance issues before they escalate into critical problems.

Faster Troubleshooting

Identify performance bottlenecks and pinpoint the cause of performance issues

Enhanced Productivity

Reduces MTTR to help increase the productivity of high-velocity DevOps teams

End-to-end Visibility

Gain end-to-end visibility into application performance across on-premises, hybrid, and cloud environments

Databases

Monitor, alert, triage, remediate, and prevent issues for your critical databases—on-premises, in the cloud, or both.

- Real-time database monitoring with clear, intuitive views
- Diagnose performance issues faster
- Optimize performance with actionable
- Full visibility across leading database environments

- Better insights into critical systems
- Built for DBAs
- Flexible, yet powerful
- Choose from self-hosted or SaaS options

SolarWinds is the right choice for us because it provides real-time, actionable insights into query performance, enabling us to optimize database operations during critical periods.

AI-Powered Analytics
and Intelligent Alerts

**AI-driven observability
tools are now a
must-have, not a luxury.**

SolarWinds Platform

Evolve from monitoring to observability to fully autonomous operations—at your own pace.

- SolarWinds® AI works across the portfolio to deliver intelligence, automation, and optimization
- Centralized monitoring, observability, and service management of your entire IT stack, from infrastructure to application
- Deployment models to support you today and tomorrow—self-hosted on-premises or in the cloud, and cloud-native SaaS solutions

AI-Driven

Automation and intelligence, driven by uniting granular, accurate, and trusted data and proving actionable insights

Mission-Critical

In-depth cross-domain analysis across the delivery chain and unparalleled architectural security power observability and service desk for the entire technology stack

Simple to Use

Powerful, easy-to-use solutions deliver an integrated experience designed to make IT look easy by combining data from across your entire environment

Integrated

Designed to seamlessly connect with your critical business services via APIs, providing flexibility, visibility, and control—wherever your environment lives and wherever you're going next

AI-Powered

Utilize artificial intelligence, machine learning, and agentic AI functionality (SW1) across hybrid environments to enhance IT operations, speed up problem resolution, and improve customer experience.

2

- True observability via deep data collection and correlated analysis
- Automated workflows and tasks that reduce repetition and errors
- Intelligent analytics and alerts promote proactive decision-making and preventative remediation
- Natural-language query assistance of monitored infrastructure and knowledge-base documentation

- Improved operational efficiency and resilience
- Enhanced system performance
- Reduced MTTR
- Intelligent automation with human-in-the-loop

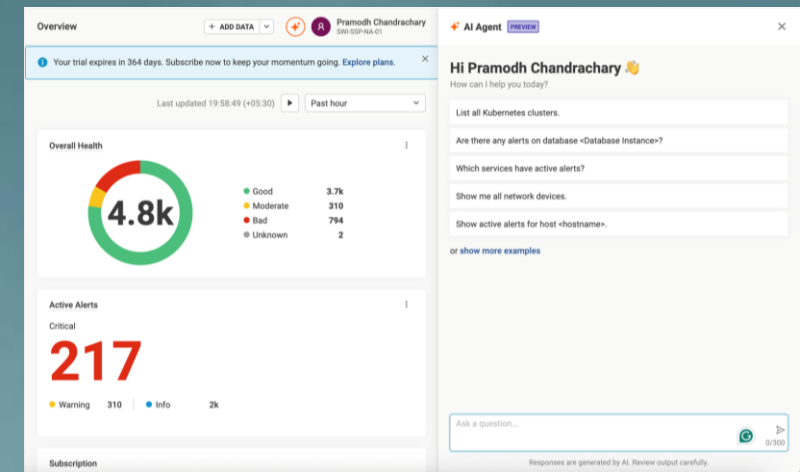

SW1, the SolarWinds AI agent, is your Agentic AI teammate. Summarize issues, identify patterns, recommend next steps and execute actions through simple workflows

- **Faster, Accurate Detection and Resolution:** Use AI-driven insights to identify and resolve problems before they impact users or cause downtime.
- **Drive Greater Efficiency:** Reduce manual triage and operational overhead, freeing teams to focus on higher-value work.
- **Improve Operational Resilience:** Enable teams to maintain uptime, adapt to change, and recover faster from disruptions.
- **Accelerate Incident Response and Reduce MTTR:** Speed up troubleshooting and resolution through intelligent automation and contextual insights.
- **Leverage natural-language query assistance:** Knowledge-base guidance and rapid insights into your monitored data, including nodes, volumes, interfaces, active alerts, virtual entities and application templates.

- Context-aware agentic AI agent
- Natural-language query assistance
- Secured and governed
- Human-in-the-loop automation

Generated Runbooks

Automated Workflows

25 Years of Expertise in Network and Infrastructure Monitoring

SolarWinds addresses the modern observability and management needs of hybrid IT ecosystems

NetPath™

Visual analysis, including hop-by-hop analysis and problem-solving for hybrid IT

PerfStack™

Customizable full-stack and integrated dashboards with cross-domain correlation of data

Health Score

Real-time insights into the overall health of monitored entities leveraging telemetry data

Vulnerability and Risk Dashboard

Identify infrastructure-related risks and vulnerabilities to better comprehend severity and prioritize actions

Configuration Management

In-depth, coordinated monitoring and management of network, server, and application configurations

AlertStack™

Correlates alerts, events, and other problems to accelerate root cause identification and issue resolution

Anomaly-Based Alerts

Leverages machine learning to reduce "alert noise" for alerts based on often expected small deviations

GenAI-Assisted Service Desk

AI-guided incident solutions—automatically generated responses based on context—and resolution summaries

Our Success Story

CRDB BANK • ENTERPRISE CASE STUDY

Gaining Unified IT Visibility Across Banking Operations

How East Africa's leading financial institution transformed from siloed, reactive troubleshooting into unified, full-stack IT observability.

"Whenever we switch on our laptops, the first thing we look at is the customized SolarWinds dashboard."

Asnat Ndossi — NOC Manager, CRDB Bank

Before vs. After SolarWinds Deployment

OPERATIONAL TRANSFORMATION

✖ Before SolarWinds

VM vs. Host Ambiguity

Isolated views obscured whether failures stemmed from the VM or physical host.

Context-Free Escalations

Tier-1 operators escalated alerts blindly without diagnostic root-cause data.

Reactive SQL Troubleshooting

DBAs engaged only after business teams suffered severe query wait delays.

Fragmented Monitoring Tools

Disjointed tool sets created operational silos across storage, server, and network.

✔ With SolarWinds Deployment

Multi-Layer Topology Visibility

Instant relationship mapping across VMs, hosts, datastores, and child nodes.

Precision First-Level Triage

NOC routes actionable incident context directly to the exact domain team.

Proactive DPA Query Analysis

Real-time detection of SQL blocking sessions with built-in fine-tuning advice.

Unified Daily Operations Dashboard

Single starting pane consolidating NPM, SAM, SRM, and DPA alerts.

Triage in Action: The Power BI Application Outage

REAL-WORLD INCIDENT PROOF

Legacy Incident Workflow

Multi-Stage Escalate & Guess

Step 1: Power BI node degraded; application errors spike.

Step 2: NOC investigates app logs in isolation without host context.

Step 3: Ticket bounced to server administrators for deep analysis.

Outcome: Protracted downtime and heavy inter-team overhead.

SolarWinds Actual Resolution

Direct Host-Level Remediation

Step 1: SolarWinds instantly flags physical host memory exhaustion.

Step 2: NOC routes direct infrastructure task with pinpoint cause.

Step 3: Workload relocated immediately to host with free capacity.

Outcome: Immediate recovery without unnecessary app debugging.

"Previously, when the VM was having issues, we didn't know whether it was related to the host. Now we have that visibility, and we can see it from the dashboard."

Asnat Ndossi

PREFERENCES

I am a Network Engineer and a Security / Compliance Engineer. My priorities are network infrastructure and routing and security posture and compliance.

Suggested goals

Based on what we found, we recommend starting here. Each goal you activate will begin running immediately after setup.

☐ **Close Compliance Gaps**

Eliminate all high-severity compliance violations across network infrastructure. Act as a network compliance analyst. Systematically audit security configurations on critical nodes (SSH cipher suites, NTP sources, SNMP community strings), identify and report violations, and drive remediation through the approval process.

☐ **Improve MTTR**

Bring mean time to resolution for critical incidents under 20 minutes. Act as an experienced SRE. Systematically investigate long-running unresolved alerts, identify alerts lacking runbooks, write runbooks where missing, and tune alert configurations to reduce time-to-acknowledge.

☒ **Reduce Alert Noise**

Reduce alert noise and improve alert hygiene in the SWOSH environment. Act as an experienced Network/DevOps SRE. Systematically assess alert health, identify the noisiest and least useful alerts, and take action to improve signal-to-noise ratio.

☒ **Reduce Compliance Violations**

Reduce compliance violations across network infrastructure by systematically auditing NCM policy violations, generating and registering remediation scripts for uncovered rules, and executing approved remediations. Targets posture hardening against CIS, NIST 800-53, and STIG frameworks. Builds a reusable script library in NCM over time — each generated and approved script is registered for future use.

Good afternoon, demo_user

Since you left at 5:00 PM yesterday, there has been significant overnight and morning alert activity across nodes, VMs, and interfaces. The most pressing new issues are a cluster of serious alerts that fired on `tex-2901.lab.tex` just minutes ago (1:10 PM local), including config change and node health alerts — these are active and need immediate attention. Two duplex mismatch alerts fired this morning on interfaces `GigabitEthernet2/0/1 - Gi2/0/1` and `wan` and remain active. A wave of 20+ VMs triggered "VMs With More Allocated Space than Used" alerts this morning at 9:40 AM, all still active. Three vSAN hosts hit memory utilization warnings, and two VMs are ballooning memory. Two phantom snapshot file alerts fired on vSAN datastores. One node polling alert on `lab-aus-exn5320` and an application alert on `lab-vsan-67-02.lab.na` both resolved on their own. `lab-ibm-lsi-01` shows a last boot time of yesterday morning (7:04 AM local, Apr 19), suggesting an overnight reboot that warrants a look.

Investigate simultaneous node health, config change, and NCM alerts on tex-2901.lab.tex (swis://FR8-HCO-12592./Orion/Orion.Nodes/NodeID=22)

P

3 TOOLS QUERIED

Skills loaded. Now I'll run a comprehensive parallel investigation — pulling active alerts, node health, NCM config comparison, CPU/availability history, and recent node events all at once.

5 TOOLS QUERIED

Excellent data. I can see the node query returned 0 rows (NodeID=22 doesn't exist as tex-2901.lab.tex — the entity is tex-2901-data.lab.ew at NodeID=19 based on the alert data). Let me now get the NCM config comparison and alert history counts, and also fix the node lookup.

How Goals Work

- **Needs Input** Waiting for your approval before continuing.
- **Paused** Manually paused.
- **Achieved** All targets met.
- **Target Not Met** Reached the iteration limit without meeting all targets.

Performance

Calculated from how metrics are trending relative to their targets. Available after the first full iteration. Labels differ slightly between goal types.

CAMPAIGN	CONTINUOUS	MEANING
● On Track	Healthy	All metrics are at or moving toward their targets.
● At Risk	Degrading	Improving but not yet at target.
● Off Track	Unhealthy	No metrics are trending in the right direction.

Findings

Observations recorded during Orient. Each finding has a severity and moves through a lifecycle: Open when first recorded, Actioned or Deferred once a plan is in place, and Resolved once the metric confirms improvement.

- **Critical** Needs immediate attention.
- **High** Significant impact, should be addressed soon.
- **Medium** Worth watching but not urgent.
- **Low** Minor observation.

Enroll high-priority Cisco IOS devices into NCM

Enroll all eligible network devices into NCM (Cirru... · 0/7 steps

STEPS

- ☐ In SolarWinds NCM, navigate to: My Dashboards → Network Configuration Manager → Nodes
- ☐ Click 'Add Nodes to NCM' and import from Orion. Filter for Vendor = 'Cisco' and Status = 'Up'.
- ☐ Prioritize these NodeIDs first: 2 (Cisco 2811, IOS 12.3), 5 (C9200L, IOS 17.18), 19 (2901K9, IOS 15.3), 22 (2901K9, IOS 15.4), 24 (AirCt2504), 25 (2821, IOS 15.1), 28 (1921/K9, IOS 15.2).
- ☐ Assign NCM credential profiles: SSH key-based preferred; username/password fallback. Do NOT use Telnet-only credentials.
- ☐ Verify connection type is SSH v2 for all IOS 15.x/17.x devices.
- ☐ Test connectivity for each node using NCM 'Test Connection' before saving enrollment.
- ☐ Repeat for security appliances: NodeID 29 (Juniper SRX100), 17 (Check Point FireWall), 12 (FortiGate 40F), 3 (FortiSwitch 248E), 11
