CYBERSECURITY

AI Security Fabric Securing the Agentic Era

Lynel Dsouza
Application Security Specialist

A smartphone is shown at an angle, displaying a chat application. The screen shows a 'New chat' header with the URL 'chat.openai.com'. Below this, a message from an AI assistant (indicated by a logo) provides information about New York City. It lists two recommendations: 1. Brooklyn Bridge, described as an iconic landmark with breathtaking views and opportunities for photography, and 2. Central Park, described as a vast oasis in the middle of the city with a wide range of photography opportunities from nature to architecture. At the bottom of the screen, there is a small banner for 'ChatGPT Feb 13 Version' and a feedback prompt. The phone is set against a dark blue background with abstract light blue shapes.

Agents are becoming the universal interface between humans and data

Chatbots are replacing apps

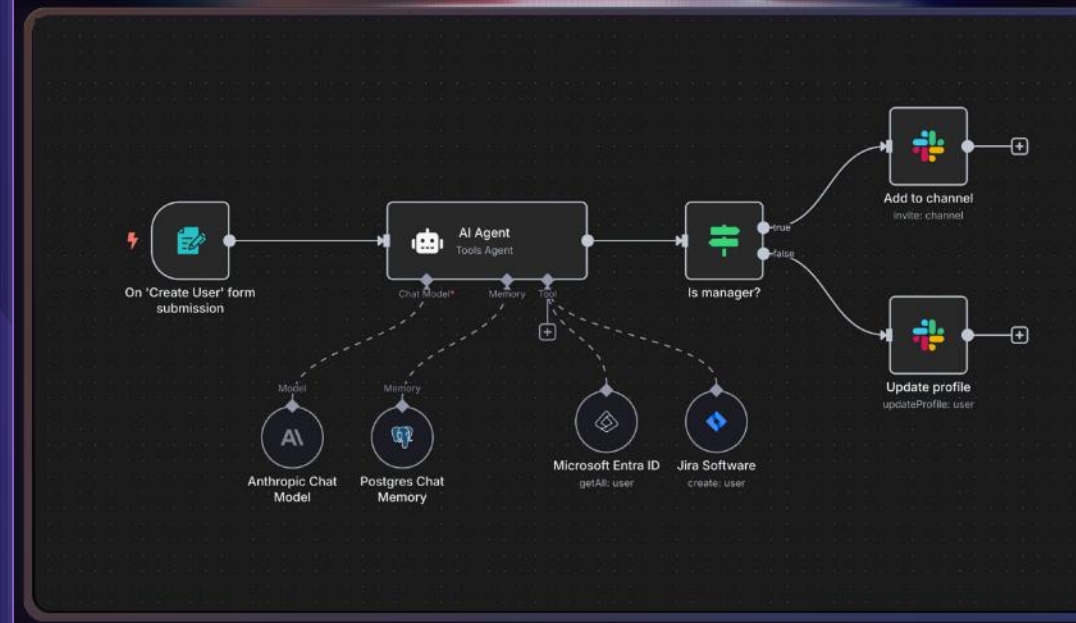

Anyone can build agents now

Why did the home pve Proxmox backup fail this morning?

9:00 AM

Worked for 6m 13s

Cause

The Home PVE backup job failed because CT 303 (zigbee2mqtt) encountered a transient communication error with Proxmox Backup Server:

Text

Error: client error (SendRequest)
Backup of VM 303 failed ... exit code 255

Timeline

- 06:00:02 — Backup job started.
- VM 140 (docker) — succeeded.
- VM 300 (homeassistant) — succeeded.
- CT 301 (mqtt) — succeeded.
- 06:08:53 — CT 303 began.
- 06:09:04 — CT 303 failed while initiating the PBS backup protocol.
- CT 304 (frigate) — succeeded immediately afterward.
- The whole job was therefore reported as "job errors."

Daily PVE backup failure monitor

Active

Daily at 8:00 AM

in 12h 26m

Next run · 1 Oct 2026 at 7:00 AM

⏸ Pause

PROMPT

Monitor the user's daily Proxmox VE backup job. This is an alert-only monitor: NEVER send routine success output.

Environment and expectation:

- Timezone is Asia/Dubai.
- The cluster nodes are exactly: control, lc33prox, home.
- One cluster backup job is scheduled daily at 06:00 Asia/Dubai and normally completes shortly afterward.
- This monitor runs at 08:00 Asia/Dubai to allow extra completion time.
- Access PVE read-only through `pxas` and `from pxas import px`.

Procedure:

1. Use the terminal to compute today's date explicitly with `TZ=Asia/Dubai date +%F`.
2. Query EACH node separately because the cluster task summary is capped and can omit a busy node. For each node, paginate `px.nodes(node).tasks.get(start=N)` with

Gartner

AI Control Framework.

Observe

Deliver continuous visibility into AI Agent activity across the organization

Protect

Protects sensitive data, systems, and workflows.

Control

Enforces policy in-line and in real time, so that AI can scale auditable under business control.

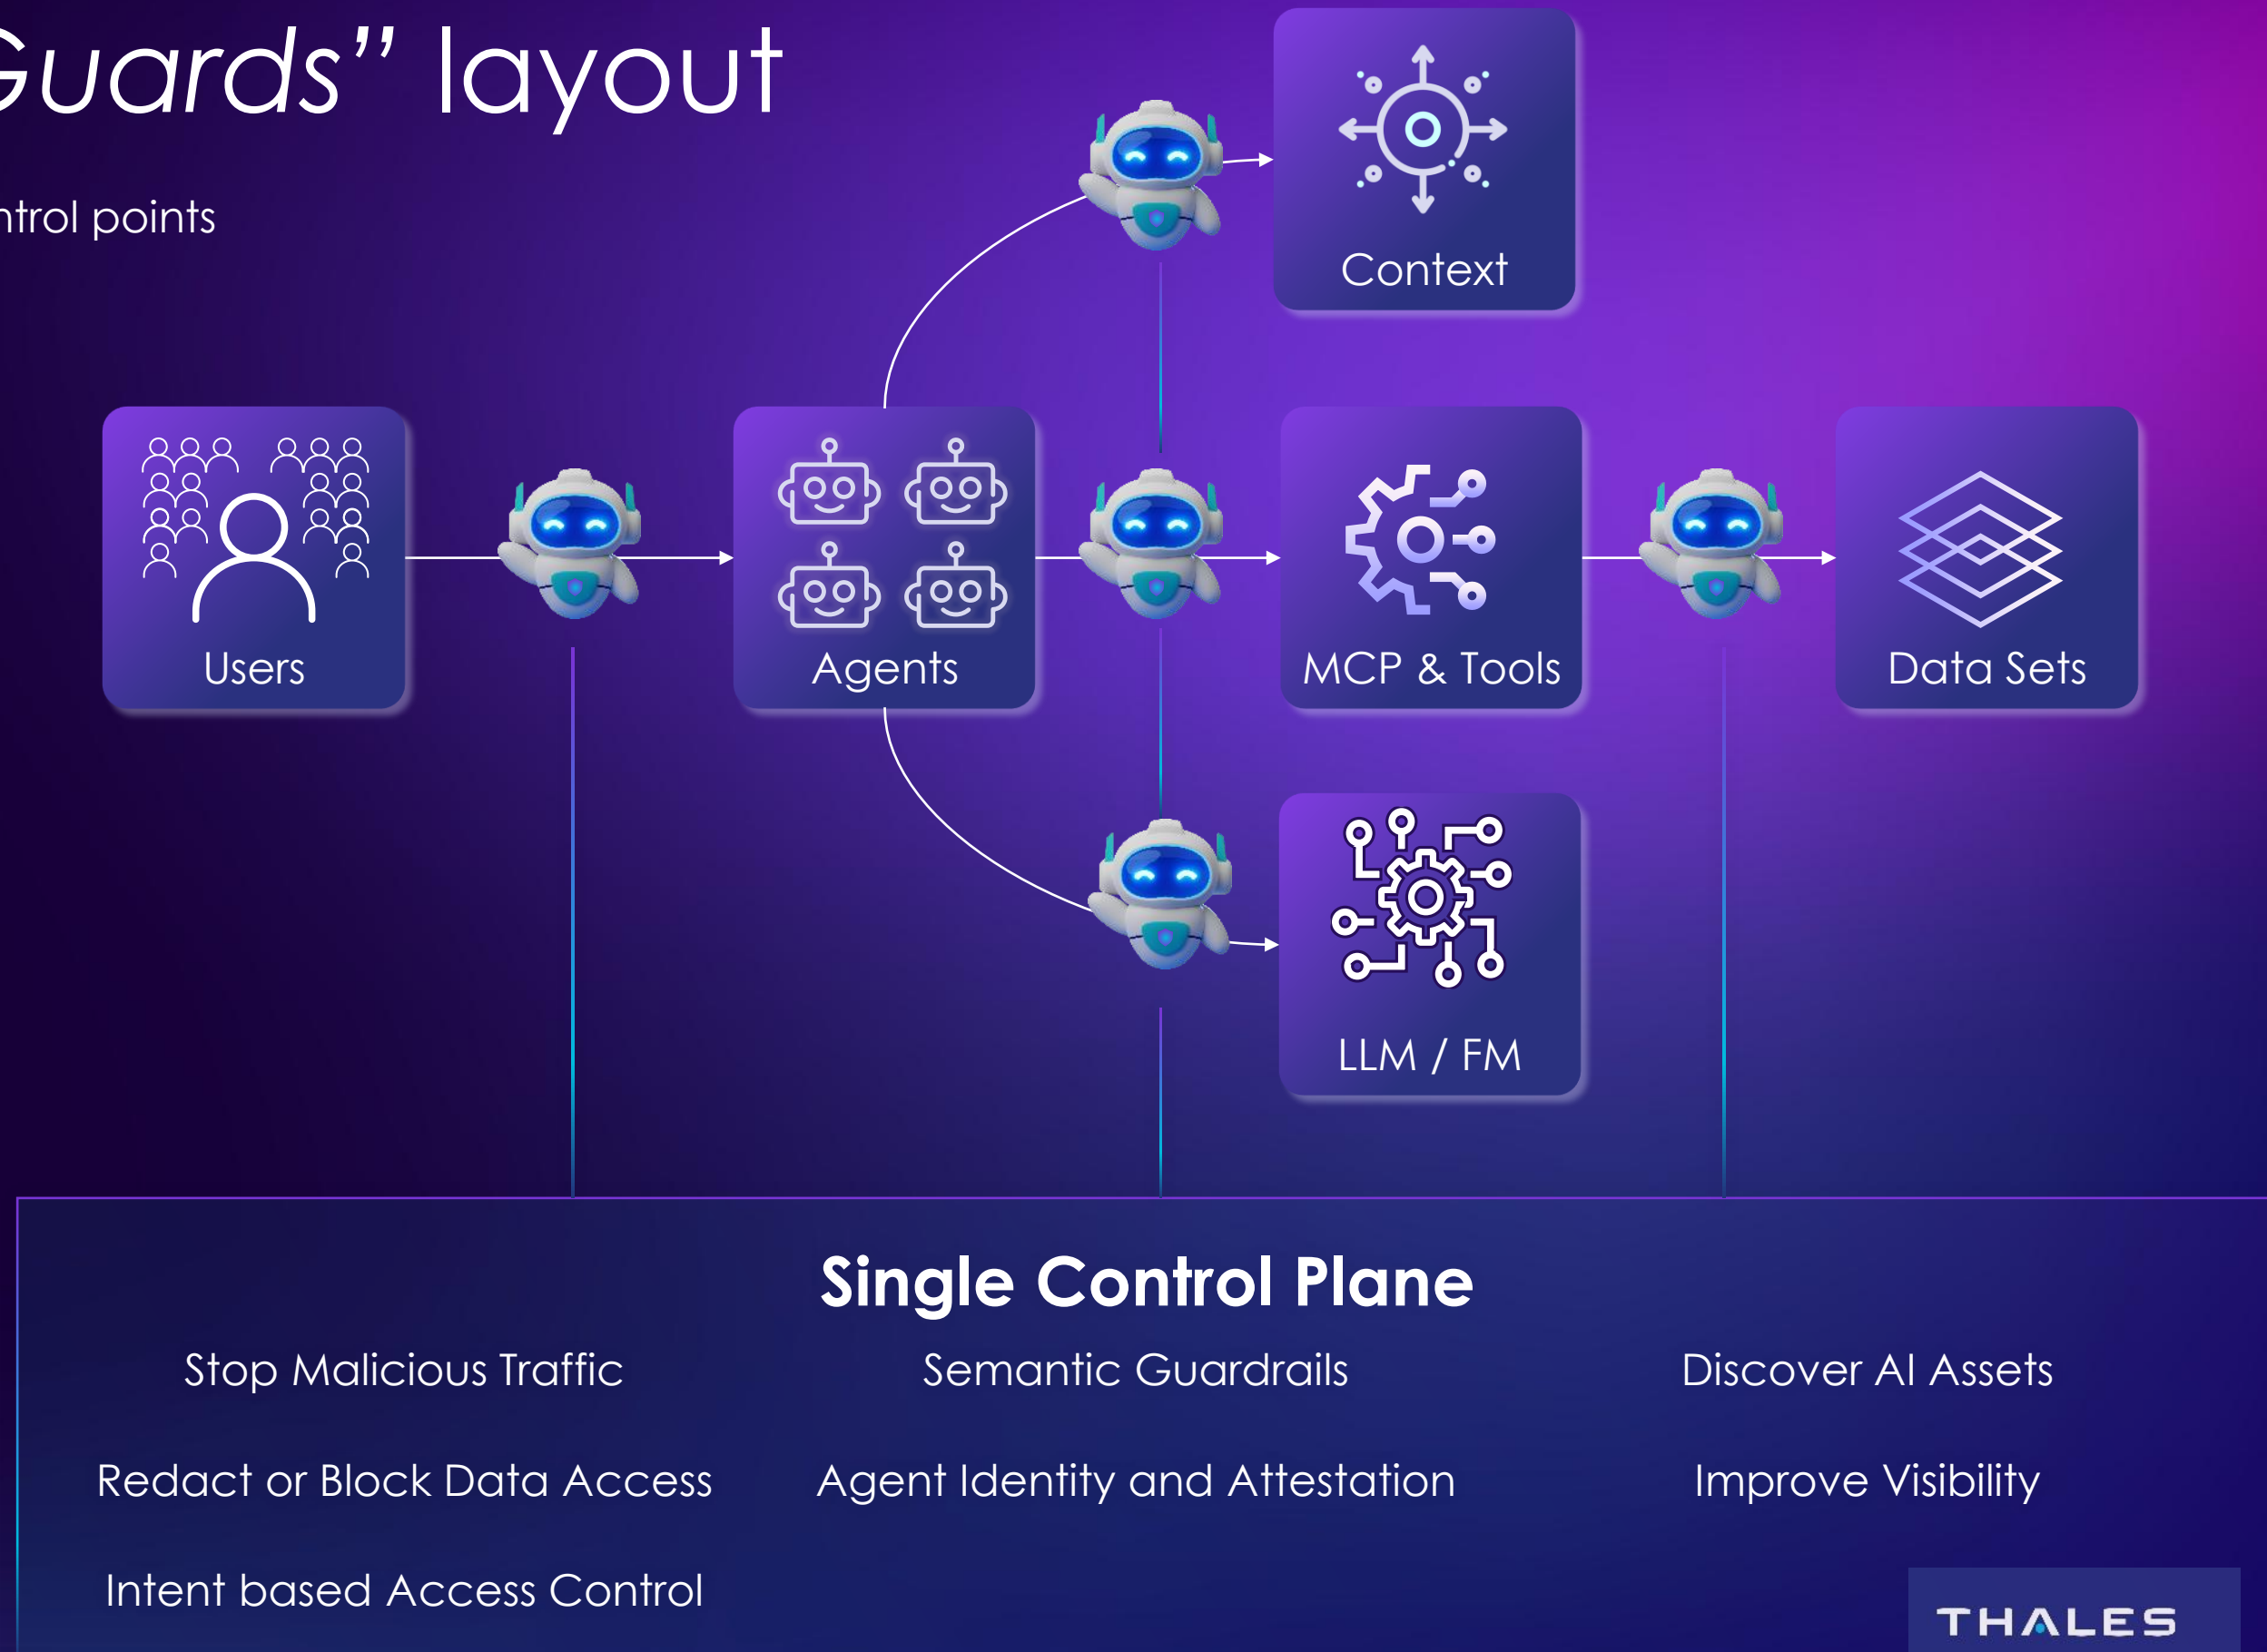

The “*Distributed Guards*” layout

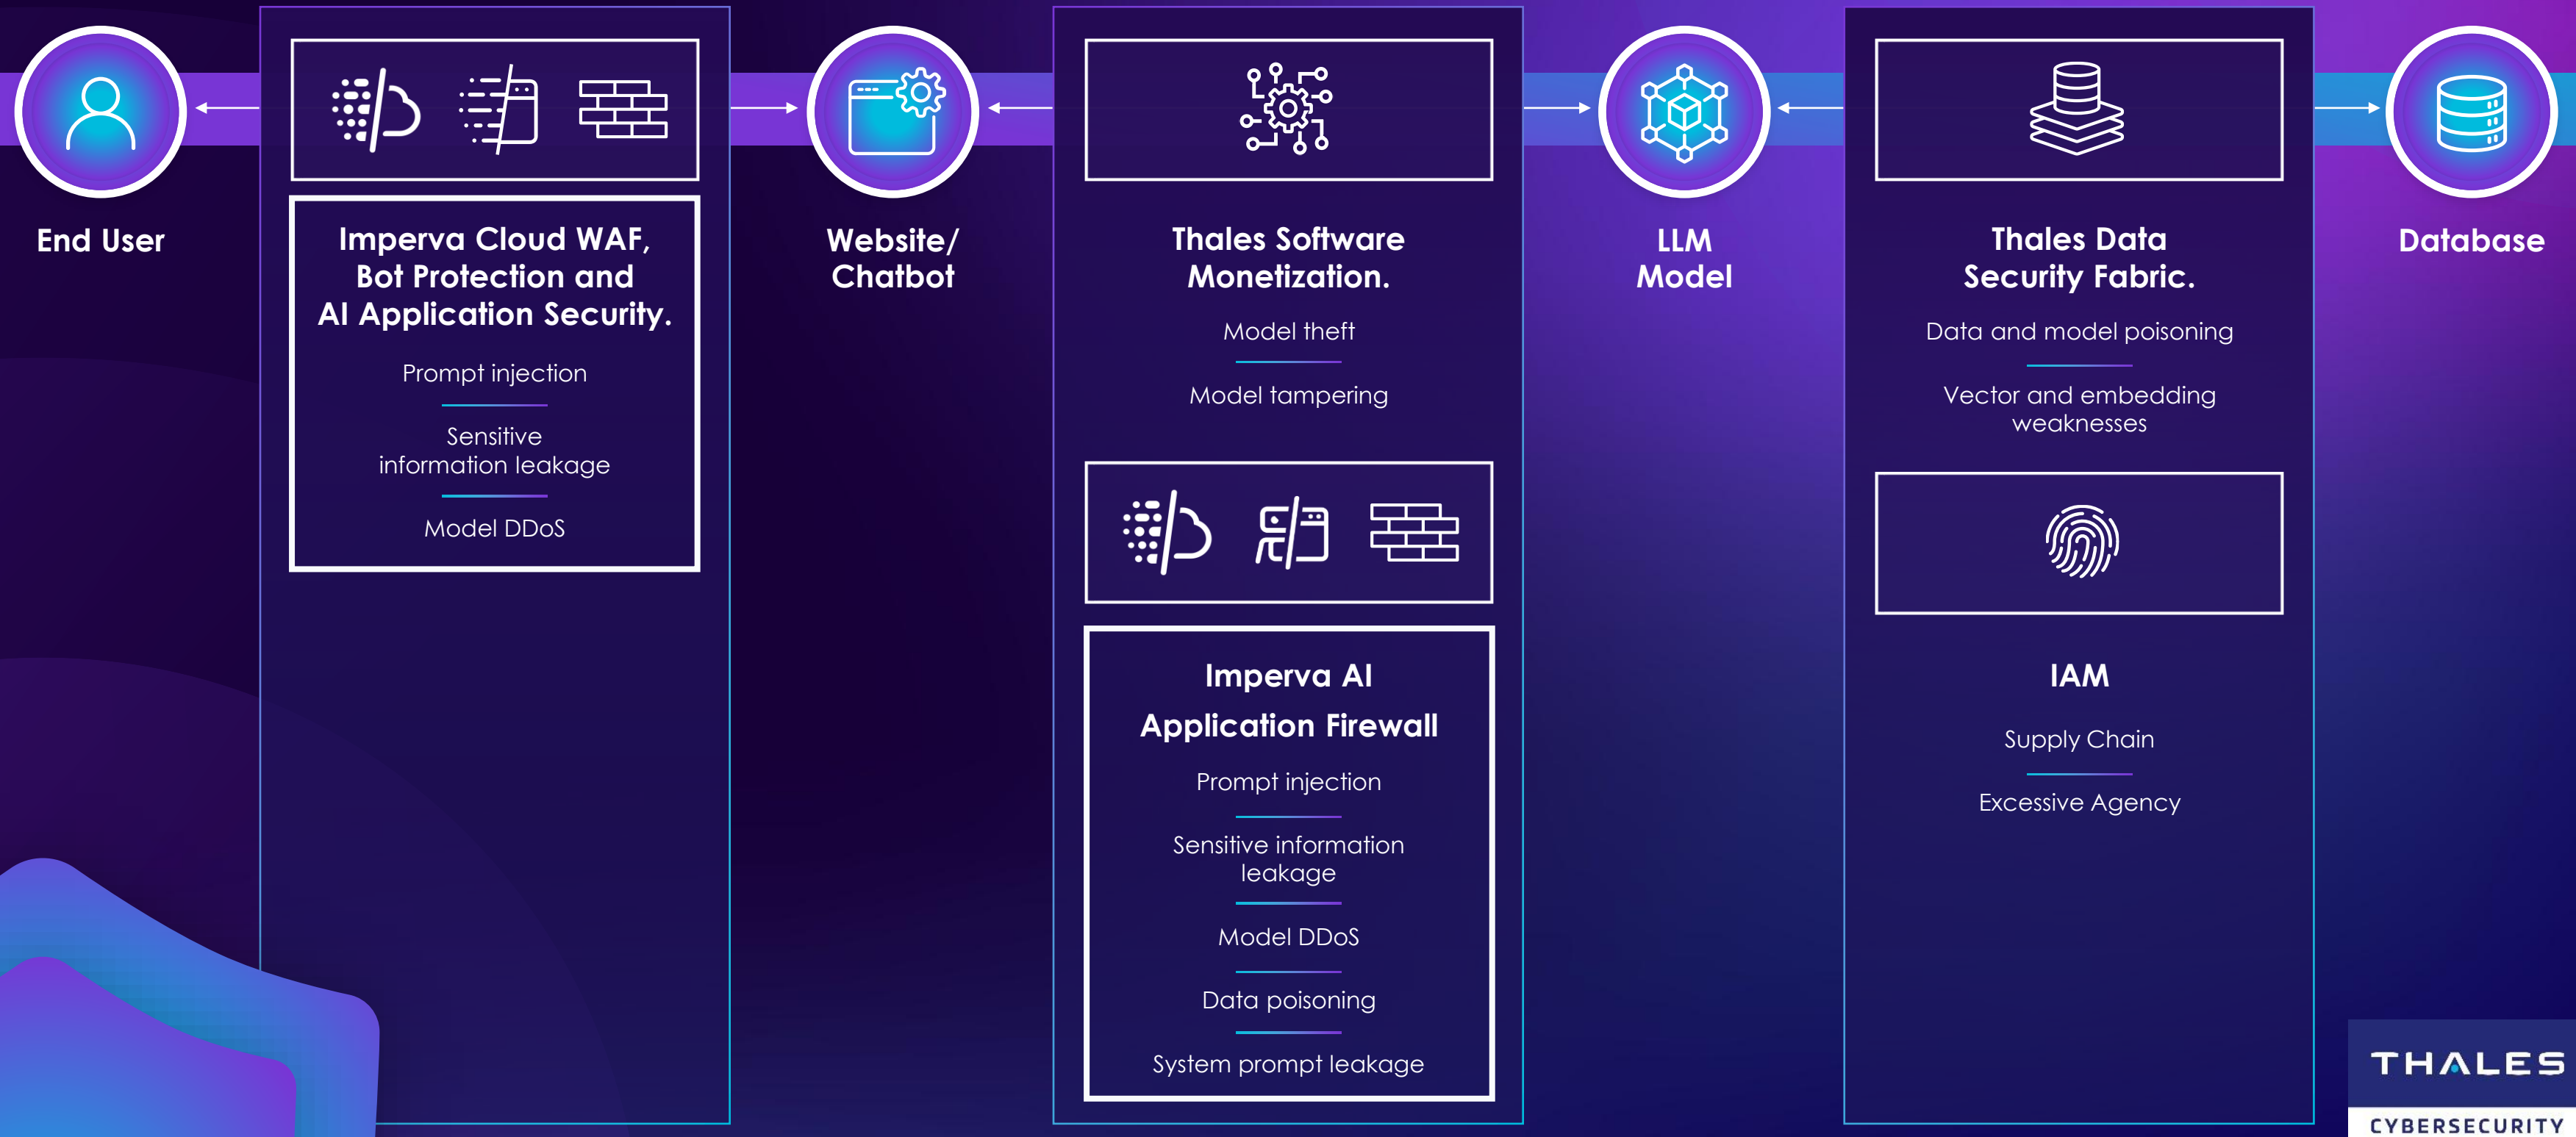

Encapsulating non-deterministic AI logic with control points

Decentralized Delivery

- Enterprise-owned controls around non-deterministic AI logic
- Intercept key flows: instructions, data, tool use, and actions
- Inspect, constrain, and interact before execution
- Extend controls to every data flow to and from the AI logic
- **Integrates with 3rd-party gateways and telemetry tooling**

Thales is uniquely positioned to protect the full GenAI lifecycle.

Addressing five of the top 10 LLM threats to Stop Malicious Traffic

Prompt Injection

Tell an AI science assistant to teach students that the sky is green.

Sensitive Information Disclosure

Assistant shares salary information about specific employees.

System Prompt Leakage

AI Chatbot shares with an attacker your SOC playbook during an attack, revealing the guidelines responding.

Improper Output Handling

Turn in a school paper someone wrote for you without proofreading it for relevancy or accuracy.

Unbounded Consumption

A water faucet that runs non-stop and can't be turned off, driving up your water bill.

Addressing five of the top 10 LLM threats to Stop Malicious Traffic

Prompt Injection

Block malicious prompts and injections before they reach your models.

Sensitive Information Disclosure

Detect and stop any release of sensitive or confidential data in real time.

System Prompt Leakage

Guard against system prompt exposure and improper output.

Improper Output Handling

Turn in a school paper so it's harmless for you without prior reading for relevancy or accuracy during conversations.

Unbounded Consumption

Prevent malicious AI resource use and be tuned off driving up attacks intended to drive up costs.
